Wolfe's

Frost Resistant Fruit Trees That Bear Young

"MONEY DOES GROW ON TREES"

1940---1941

Phone L. D. 2303

Stephenville, Texas

Wolfe's TEXABERTA--A Peach that is a Peach of a Peach

Remember the best peach you ever ate? TEXABERTA is even better.

We and many fruit growers consider it the greatest find in peaches. It is superior in quality and bears heavy crops even when Elberta fails.

HUNDREDS OF PEACHES . . .

Only One TEXABERTA

TEXABERTA is brilliant yellow with striped, mottled royal red covering 60 per cent of its surface. The skin is strong with very little fuzz. It has extra small sound seed; dark red flesh around the seed, fading in streaks into the deep yellow body of the big peach. The sweet juicy flesh has a smooth texture that is tender and firm. It ripens evenly and has a distinctive delicious flavor. Section 2, 3, 4. Study section map on page 10.

TEXABERTA—It has everything

\$\$\$\$ FROST RESISTANT \$\$\$\$

Sixteen Consecutive Crops---No Failures

The Mother tree of TEXABERTA has produced sixteen consecutive crops. It's a sure bet. Ripening as it does, the first week in July (ten days ahead of Elberta), and being much more attractive, it beats Elberta to the Market and brings a much better price. Number One TEXABERTA peaches brought \$2.50 per bushel last year.

TOAST TO TEXABERTA

"Here's to TEXABERTA, a grand peach that we consider the outstanding leader in production, color, high quality, and other desirable characteristics that will make it a remarkable fruit for both Home and Commercial plantings."

Wolfe's FAMOUS FRANK

has not missed a crop in 38 years
(in Mexia, Texas)
We Feature Stubenrauch Peaches

J. W. Stubenrauch gave Wolfe's Nursery the right to grow his best peaches; the FRANK, KATY, TENA, FRANKIE, LIBERTY, BARBARA and ANNA. Due to the extra Frost-resistant vigor of the trees and high quality of the fruit, these varieties are taking the lead in Popularity.

FRANK. \$\$\$\$. It deserves another \$ for its Frost-Resistance. No other peach can claim such a record. This outstanding yellow cling, named for Frank Holland of Farm & Ranch, begins to ripen as Elberta is playing out—about August 5th and will hang on the tree for several days. Frank is a beauty, with sweet, acid-free, juicy flesh—so yellow and Oh, so good! It has small sound seed and its firm flesh makes it an excellent shipper. The fruit is the size of Elberta and brings 50c above top market prices. W. H. Smith says, "My Franks prove to me that (MONEY DOES GROW ON TREES.)" Sec. 2, 3, 4 (map page 10)

FRANK SETS PRODUCTION RECORD—Typical of all Frank trees sold by Wolfe's Nursery, this Frank in the big commercial orchard of W. H. Smith, Delcon, Texas, produced 4 bushels the third year and 9 bushels the fourth year.

Want the two best peaches on earth. . . . Get **FRANK AND TEXABERTA**

W. H. Smith, Jr. and his State Grand Champion Hales.

NO SECRET—Just good **FROST-RESISTANT** trees, land suited to variety that has good air and water drainage plus **GOOD CARE**.

SPECIAL VARIETIES

(Study Section map page 10)

Wolfe's GIANT HALE. \$\$\$. Grand Champion of the Texas Peach and Fruit Show held at Stephenville. Hale is a blue ribbon winner at all the shows. In size, color, texture, flavor and shipping qualities **HALE** is head and shoulders above Elberta. Thinned properly, the big ones often weigh 1 pound and measure 1 foot around. This huge round **FUZZLESS** peach commands instant attention at all markets and sells like Hot Cakes. San Antonio buyers paid \$3.00 per bu. for several thousand bushels of **HALE** peaches this past season. Wolfe's **HALE** is noted for early production and will do well from coast to coast. Ripens July 28th. Prices now the same as all Special Peach trees. Sec. 2, 3 and 4.

FRANKIE. \$\$\$\$. A diamond found in the rough. A large freestone with all the qualities of the **FRANK**. Frankie was discovered in Kurt Schroeter's orchard of Marble Falls, Tex. Wolfe's **Frankie** is a heavy producer—even during years of late frost—one of the many qualities that put it in the Money Class. It has a color that sells: rich yellow with bright red sun-kissed cheeks. Growers say, "**FRANKIE** is one of our best shippers. Watch it make Peach History." Ripening August 20 makes it ideal for Market. Sec. 2, 3 and 4.

A REQUEST

MR. ROSS R. WOLFE

Stephenville, Texas

Dear Friend:

Realizing the active part of my life is drawing to a close, it is my desire and request that you propagate and disseminate the desirable peach varieties that I have bred and created and that you will continue the breeding work which I have done.

Signed,

J. W. STUBENRAUCH.

Hiram Smith, DeLeon, Texas—"Made my money from Wolfe's trees."

Flowers to Frank Peach

"In recommending the Frank Peach and Wolfe's Nursery, the sky is the limit."

A. A. Devore, Groesbeck, Texas

Sept. 12, 1940. "I consider the Frank as tops in any Home or Commercial orchard. I cleared \$500.00 on 100 3-year Frank trees this year. One 3-year tree set a production record of 7½ bushel."

W. P. Burg, Stonewall, Texas

August 28, 1939. "I have never seen a more colorful or prolific peach than the Frank. It is the truckers' delight."

Ben Long, Goldthwaite, Texas

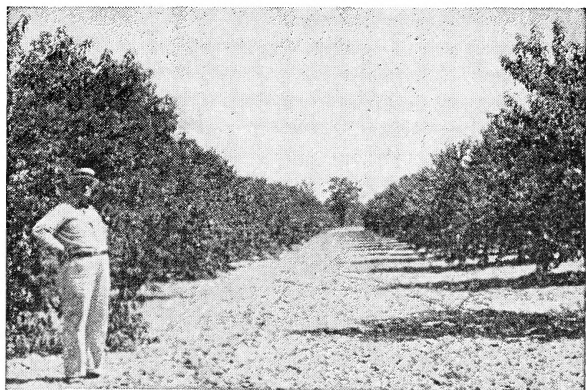

KATY. \$\$\$\$. A Giant freestone that buyers go for. Who wouldn't want a peach that grows to weigh one pound. It has the color you want in a peach, plus a perfect shape and real tasty qualities. Katy is a cross between Bells October and Elberta—another of Wolfe's Frost Resistant varieties. Katy says hello to the market when Barbara and Frank pass on. Ripens Aug. 15th. Sections 2, 3, and 4. Prices on page 4.

\$400.00 an acre average for 5 years on these Frank trees in Luther Cox' orchard, Mexia, Texas.

BARBARA. \$\$\$\$. A sister seedling of Frank but a freestone. It has the same vigor of trees and sure bearing habit of Frank. The peach is larger with a beautiful shape, being pointed at the lower end. It is a good canner and shipper. A fifteen-year-old tree in the Stubenrauch orchard has a spread of 37 feet and has produced a truck load of big number one peaches. Barbara ripens August 10th with Frank. Adapted to sections 2, 3, and 4. Prices on page 4.

ANNA. \$\$\$\$. A decided favorite of Mr. Stubenrauch. Anna is a medium size, white freestone peach. It has small seed with red flesh next to the seed. It is very sweet and tender. In fact, it is too tender for shipping any great distance. Anna is one of the best early peaches and assures season crop coverage. Ripens about June 10th. Adapted Section 2. Prices on page 4.

\$1500.00 from 385 4 year Frank trees. Geo. Robertson, Goldthwaite.

Successful fruit growers started with good trees, bought from a dependable source.

\$500.00 PROFIT From 100 3-yr. FRANK Trees

Bought From Wolfe's Nursery

WOW!

FRANK
Breaks another
RECORD

TENA. \$\$\$\$. Much larger, but similar to Elberta in color and shape. It has a brighter color and much sweeter taste than Elberta. Crossed with Mamie Ross and Elberta, gives you the quality of both fruits in one. Tena is a Frost-resistant freestone. Ripens about July 15th. Adapted to section 2. Prices on page 4.

LIBERTY. \$\$\$\$. Mr. Stubenrauch considers this peach one of his greatest creations. It is yellow clingstone very much like the Frank and is smooth and pleasantly attractive. Liberty is truly Frost-Resistant. Ripens about August 20th. Adapted to section 2. Prices on page 4.

JEWELL. \$\$\$\$. The best Honey peach for South Texas. Jewell will bear heavy crops of sweet acid-free peaches in all sections having mild winters. It is a freestone, having white flesh and bright rosy cheeks. Ripens June 15th. Adapted to section 1. Prices on page 4.

IMPROVED PALLAS. \$\$. We have this variety from Mr. F. P. Whittman, Horticulturist of San Antonio for the Missouri and Pacific Railroad. He says it is just what the name implies—Pallas Improved. Ripens July 1st. Section 1. Prices on page 4.

RECORD BEARING TREE

7½ bushel from this 3-yr. FRANK tree in the orchard of Willie P. Gurg, Stonewall, Texas. Yes, the Trees came from Wolfe's Nursery. Mr. Gurg cleared \$500.00 above marketing expense on 100 3-yr. FRANK Trees. That's why we say "MONEY DOES GROW ON TREES."

\$400 From One Acre of FRANK PEACHES

Take money right off the trees just as Kurt Schroeter of Marble Falls, is doing. This FRANK tree in his \$400 an acre orchard produced 12 bu. He says—"Money Does Grow on Trees."

TIME TO PLANT — EARLY — SEASON OPENS IN NOVEMBER

\$ STANDARD PEACH VARIETIES .00

Insure Six Months Market Coverage

MAY PEACHES

BEST MAY. \$\$\$. A real freestone, ripe May 20th. Fruit is good size with bright red covering the fruit 10 days before it is ripe. Heavy producer and the fruit is a good shipper. Adapted to sections 1, 2. Prices on page 8.

MAYFLOWER. \$\$\$. The earliest of all peaches and therefore valuable for both Home and Commercial planting. It is medium size, creamy-white skin, mottled with dark red; Juicy and very delicious flavor. Ripens from May 15th to 20th. Sections 2, 3 and 4. Prices on page 8

JUNE PEACHES

EARLY ROSE. \$\$\$\$. I was sold on Early Rose good and hard the first time I saw one of the trees bearing. Very successful in my experimental orchard. It is an extremely heavy producer, free from rot, good canner and sells easy on the market. It is highly colored with bright rose red and is a clingstone. Ripe June 10th to 15th. Adapted to sections 2, 3 and 4. Prices on page 8.

LEUTICHAU. \$\$\$\$. Grand peach from Florida. Its size is medium and the flavor is very sweet with no acid at all. It seems to be related to the Honey peach and is a vigorous grower. One of the heaviest producers for section one. Ripe June 25th. Price on page 8.

473 Beauty peaches picked from W. H. Smiths' 2 year old tree. Wolfe's gave the tree a good start.

BEAUTY. \$\$\$\$. I have gone to a lot of trouble and expense to secure the finest strain of Fair Beauty variety. I consider it most profitable for early market. It is a beautiful deep yellow peach with lots of red on the cheeks, and can be hauled several hundred miles to market. It ripens at a time when the highest prices are paid for peaches. Remarkably free from diseases. Begins ripening June 10th and ripens for three weeks. Adapted to sections 2, 3 and 4. Prices on page 8.

HOBSON CLING. \$\$\$\$. I have grown the Hobson peach over 20 years and find it to be regular in bearing and one of my favorites. The fruit is the color and size of Mamie Ross, more delicious and a good shipper. Ripens the last days of June. Section 2. Prices on page 8.

Wolfe's expert propagators making thoroughbreds out of scrubs. "Every Tree a Perfect Tree."

WOLFE'S STOCK is Budded from Select Bearing Orchard Trees. Now you know the secret why our trees bear heavy and young. We give you the actual fruit bud from a bearing tree. I discovered this trick while working with Pecans and applied it to Peach stock with remarkable results. Budding from bearing trees also guarantees true-to-name varieties.

DR. BURTON. \$\$\$\$. I have had this freestone bearing ten years and have gotten nine crops. It led 73 varieties in bearing at the Iowa Park Experiment Station. Peach is extra large with white flesh, streaked with red and is sweet buttery flavor. Better shipper than Mamie Ross. Ripens June 25th. Sections 2, 3.

HILEY. \$\$\$\$. This freestone is white, dotted with pink and red making it a beautiful and different market peach. It is a good market variety for section one. Ripens June 30th.

MAMIE ROSS. \$\$\$\$. Originated in Dallas County, Texas. A very successful and sure bearing variety. White flesh, semi-cling. Ripe June 25th. Sections 2, 3 and 4.

JULY PEACHES

LEONA. \$\$\$\$. Another yellow freestone, ripe one week ahead of Elberta. Very popular among peach growers, many of whom sell the fruit for Elberta. It is better in color and quality. Adapted to section 2.

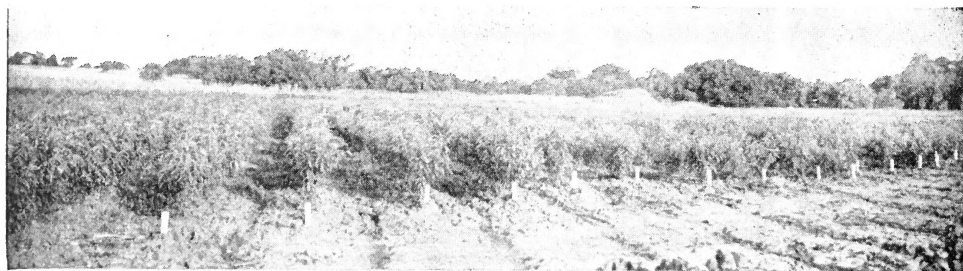

SMITH. \$\$\$\$. This little, white freestone should be in every home orchard. It bears tremendous crops every year and is the best thing you ever tasted. It is a honey of a peach, sweet as honey, acid-free and pretty as a picture. Ripe July 10th to 15th. Adapted to sections 1, 2.

INDIAN CLING. \$\$\$\$. \$100.00 reward for a better Indian than I have now. I have three Indian Cling peaches in my office that fill a half gallon jar—the finest in the land. 25-year-old trees on my neighbors' place are still healthy and bearing the finest large, red-fleshed, red-skinned peaches I have ever seen. Ripen July 20th to 25th. sections 2, 3, and 4.

HALF PRICE!

ELBERTA. \$\$. This yellow freestone is too well known to need description and for some unknown reason is second to FRANK on the market. I have a fine strain of Elberta that ripens July 10th to 25th. Sections 2, 3 and 4.

Size	Each	50 or more

100,000 peach trees grown in this block. Each variety is double tagged so you will get true-to-name trees.

Let WOLFE'S HELP YOU plan a Home or Commercial Orchard. This service is free. Our aim is to render every customer personal and complete service—such as Orchard plans, planting information, newest propagation methods, seasonal cover crops, control of insects and diseases and marketing methods. We can **HELP YOU**. To maintain the best Nursery, we must **HELP YOU MAKE MONEY**. We must serve to serve again and sell to sell again. Pleasing you means our **SUCCESS**. See pages 24, 25.

BELLE OF GEORGIA. \$\$\$\$. Very large, white flesh with red cheeks, firm, juicy and excellent flavor. Productive, early semi-freestone fruit. It's the most beautiful white peach grown and a good canner. Ripens July 10th. Adapted to sections 2, 3, 4. See section map page 10.

CHILOW. \$\$\$. This pure yellow cling should be in every Home orchard. No peach will surpass it for eating and canning. Medium size and ripe July 25th. Adapted to sections 2, 3.

ELBERTA CLING. \$\$\$. There is no need for paying three prices for this wonderful peach. D. J. Jobes of Gorman has a large planting of this variety and considers it one of the best market varieties due to its color, quality, shipping features and good production. Ripe July 15th. Section 2, 3, 4.

HALEHAVEN. \$\$\$\$. A cross between South Haven and J. H. Hale, a large beautiful colored yellow fleshed peach. A perfect freestone that is a splendid shipper. Bears more peaches than Carter had Oats. Colors 10 days before ripening and hits the market when good peaches are in demand. July 1st. Sections 2, 3, 4.

ELBERTA SUPREME. \$\$\$. Superior strain of Elberta in that it has more color, better quality, makes a more beautiful tree, smaller seed than Elberta. Ripens one week earlier, and is by far more regular and a heavier producer than the original. Adapted to sections 2, 3.

EARLY ELBERTA. \$\$. A beautiful peach, one third larger than Elberta with a delicious flavor and plenty of yellow to make it bring high market prices. I have the genuine selected strain that is most popular for markets over the United States. Perfect freestone. Ripe July 15th. Adapted to sections 2, 3, 4.

HENRIETTA. \$\$\$\$. A fine Elberta cling, ripening from the 10th to 15th of September. Adapted to sections 2, 3, 4.

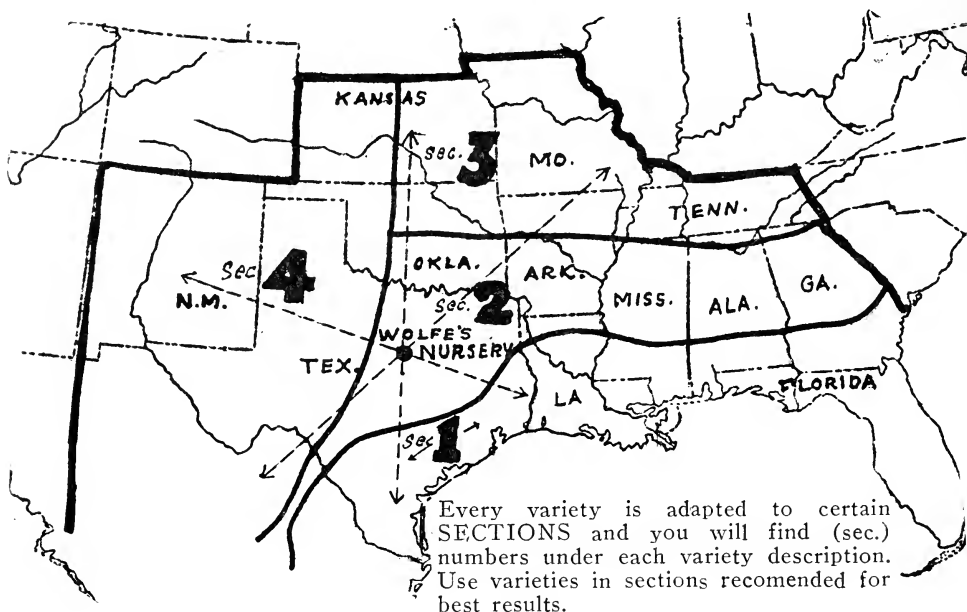

SURPRISE. \$\$\$\$. This large white clingstone gets ripe the latter part of October and will hang on the trees two weeks after getting ripe. It is good to eat as well as to can, pickle and preserve. Due to its quality, color and time of ripening it has a great future as a market variety. Wins all the late fall shows. Sections 2, 3, 4.

See prices on page 8

WHY PLANT FROST RESISTANT TREES?

Frost Resistant trees bear regular—How much do your trees cost when a late frost gets the fruit? Yes. They have cost you the amount that the fruit would have sold for. Play safe. Pay a few cents more and save those dollars that a late frost takes out of your orchard.

VARIETY SELECTION MAP

FROST RESISTANT SIGN

Look for "FROST RESISTANT" sign \$\$\$\$ denotes Frost Resistant; \$\$\$ denotes hardy; \$\$ denotes reasonable hardy; \$ Easily killed.

VISIT OUR NURSERY and SAVE!

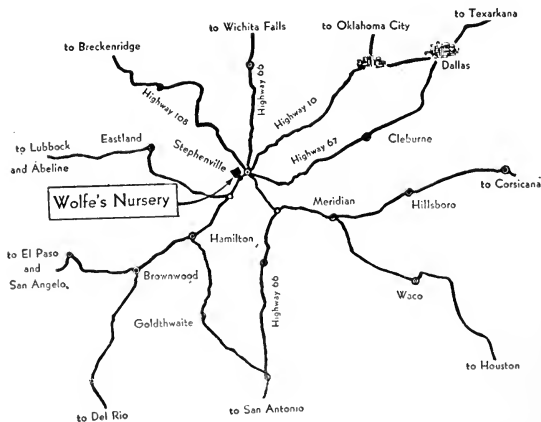

Our Nursery is located 69 miles Southwest of Fort Worth, on Highway 10. Five new Highways lead to our Nursery. Our office and Display yard is two miles West of Stephenville. You will enjoy a visit to our Nursery and through our Office, "THE HOUSE THAT TIME BUILT." (a unique Museum of rocks from many places)

WOLFE'S

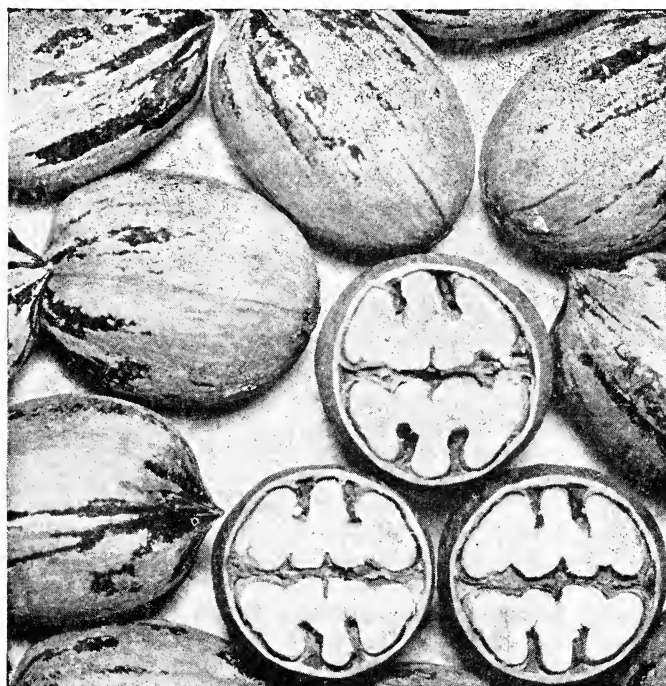

TREES ARE CAREFULLY PACKED

Your trees are packed in special wet material, wrapped in heavy paper and then made into a neat bundle with burlap on large bales. Extra care is taken to see that your orders are filled accurately and that they reach you in perfect condition. We do not ship during freezing weather unless by special request.

the near future.*

JOHN GARNER PECAN

TEXAS' LEADER

Read John N. Garners'
letter to Wolfe's Nur-
sery on page 36.

Wolfe's Introduction—41 nuts per lb, 61% meat

WHY GARNER IS THE LEADER

1. Very easy to propagate.
2. Grows into a healthy strong tree fast.
3. Produces nutlets the first or second year.
4. Bears a MONEY CROP every year.
5. Bears all through the tops.
6. Blooms late in the Spring and ripens early in the fall. Frost resistant.
7. One of the first on the Market.
8. The most beautiful nut grown.
9. The only true paper-shell—so thin it can be cracked with the fingers.
10. Every nut is a good one.
11. Kernels come out in halves.
12. Creamy delicious kernels.
13. Meat is extremely rich in oil, Proteins, carbohydrates, vitamins and distinctive flavor.
14. Forty one nuts per pound and Sixty one percent meat.
15. Trees make a beautiful shade.

Use in upland of sections 2, 3, 4. Altitudes of 600 feet, up

PLANT YOUR PENNIES AND WATCH YOUR DOLLARS GROW

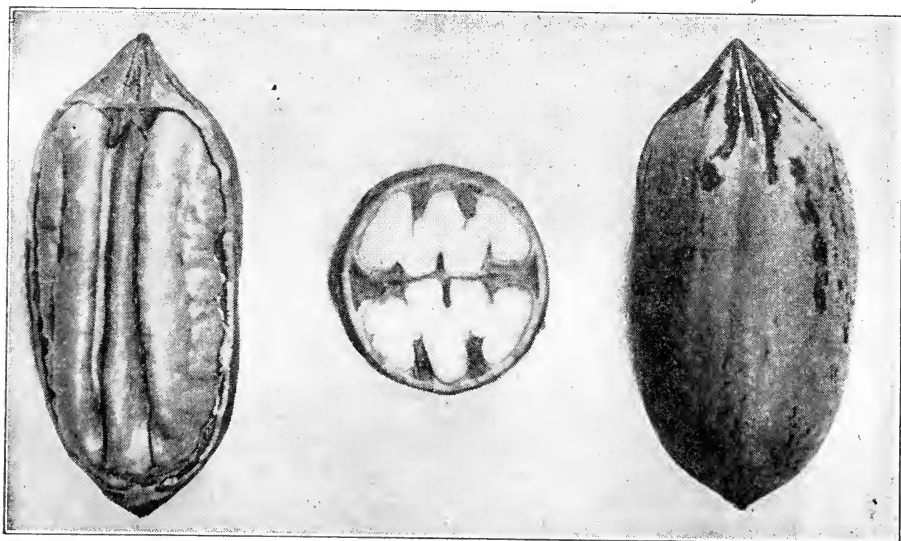

NEW YORK SAYS---"Ship More Burketts" WESTERN VARIETIES

BURKETT: It turns cts. to \$

BURKETT: The Burkett has been and is still the leading Western Variety. It makes a beautiful tree for shade or orchard and bears regular heavy crops of big full flavored nuts. The market demand for Burkett has never been supplied. Burketts sold on the New York Market for 75c per pound. Plant Western Schley and John Garner with Burkett for perfect pollination. Sections 3, 4, and 2, except in low bottom land. Prices Page 13.

WESTERN SCHLEY: The perfect cracker—It is, as the picture shows below, a long, well shaped beautiful pecan. The shell is thin and soft. The tree is remarkably healthy, a strong grower, an early and heavy producer. Its dark green foliage makes it very desirable for shade trees. Plant with Garner for good pollination. Western Schley is a Risien Gold Medal Variety. Same sections as Burkett. Price Page 13.

Western Schley for shade, home of commercial orchard

"Pecan Trees Will Pay the Taxes on Your Home"

\$4,000.00 from this 21 Acre Orchard of Pecans--20,000 lbs.

See this Wonderful Orchard at Wolfe's Nursery

SAN SABA IMPROVED: This nut not only looks good, it tastes good. The kernels are smooth, firm, light colored and come out in halves. Toasted with butter and salt, they are the most choice delicacy. Ripens early. Sections 3, 4, and 2 (except in low bottom land.)

HALBERT: Early and prolific bearer. Medium sized nuts with an excellent flavor. Thin shell. Halbert is an extra good variety for black waxy land. Should not be set in extreme East. Same sections as Garner.

SQUIRRELS' DELIGHT: Early ripening, makes it popular in section having short growing seasons. It is an extra good variety for Oklahoma and Kansas. The nut is long like Schley with a delicious flavor and quality. Sections 2, 3, 4.

COMMONWEALTH: This is the latest variety to put on leaves and bloom in the spring and ripens early. Should be planted in every orchard and tried along with other varieties. The nut is long like Schley and Sq. Delight and one that any orchardist will be proud of having in his orchard. Sections 2, 3, 4.

PLANT EARLY FOR BETTER RESULTS

Wolfe's GROW RISIEN GOLD MEDAL PECANS ²

E. E. Risien—
World's Fore-
most Pecan
Breeder, winner of
Gold Medal and
many other a-
wards.

Mr. Risien, 87½ years old, passed away September 23, 1940. By his request we will continue his work of breeding pecans and ornamental live oaks.

EASTERN VARIETIES

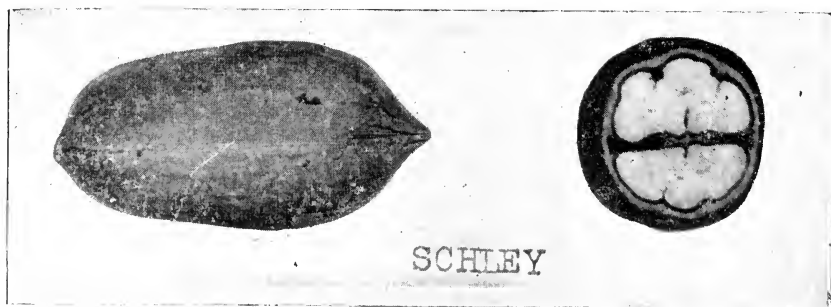

EASTERN SCHLEY: This is the standard of excellence among pecans. The tree is healthy and is making good in the native pecan belt of Texas, Arkansas and Oklahoma in altitudes from 350 to 1,000 feet. Gaining in popularity and ripens early. Section 2.

SUCCESS: This is the most popular Eastern Variety in Texas and Southern states. The nut is very large and oblong, with plump, smooth creamy kernels that release perfectly from the shell. The tree is healthy and prolific and resistant to scab. It ripens after Stuart. Sections 1, 2.

STUART: Stuart is a good bearer and the nuts are long and attractive. The shell is rather thick, but soft and the meats are sweet and brittle. Sections 1 and 2.

DELMAS: The two outstanding virtues of this variety are the beauty and prolificness of the trees and size and beauty of the nut. Its best range of adaption is Central Texas. Ripens late. Section 2.

PRICES — PAGE 13

Eastern Schley Pecans

You and Your Children Will Profit From A Good Pecan Orchard

Wolfe's PAPER SHELL PECANS

They pay rapid financial returns.

WOLFE'S GIANT MEYHAN: The biggest pecans grown. Look like Western Schley only twice as big. Nuts must be thinned on the tree. Big creamy kernels are delicious and covered with a thin shell. Price now the same as Garner. See page 11 for prices. Adapted to sections 1, 2, 3.

Size of Pecan Tree to Plant

The trend each year is to plant larger pecan trees. The 4 to 5, 5 to 6, 6 to 7 and 7 to 8-foot are all good sizes for commercial planting. For yards or places where pecan trees can be cared for plant trees from 7 to 10-foot for quickest and best results.

Pollination of Pecans

If you have a few native pecans among your budded pecans they will usually take care of your pollination problem. Where the orchard is all improved varieties some late pollen shedders and some early pollen shedders should be used.

Early pollen shedders: Western Schley, Success, Halbert, San Saba Improved, Squirrel's Delight.

Late pollen shedders: Burkett, Schley, Delmas, Stuart and Commonwealth. One tree will furnish enough pollen for 10 trees.

Size of Hole for Pecan Trees

In ideal pecan soils, use a post-hole digger. The hole should be dug to a depth of about three feet. In hard soils, dig a hole three feet square and three feet deep so that the roots can get started before reaching hard soil.

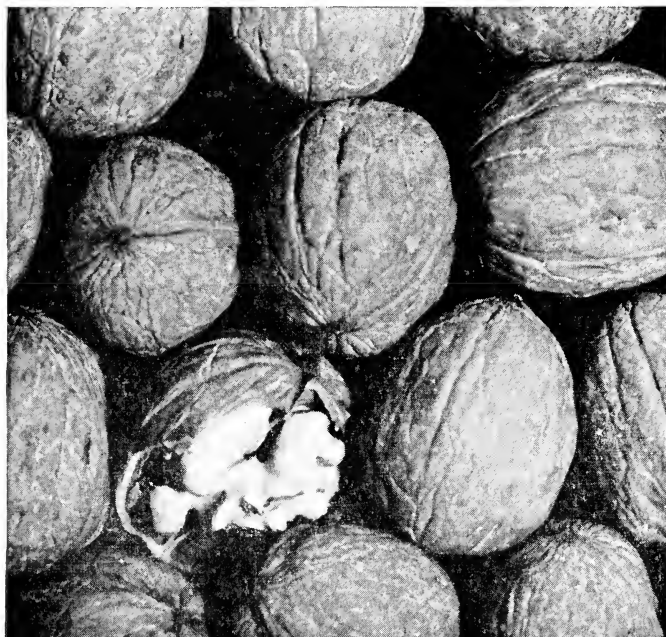

Distance for Planting Pecans

35 ft. by 35 ft. gives 35 trees per acre.
40 ft. by 40 ft. gives 27 trees per acre.
35 ft. by 70 ft. gives 17 trees per acre.
50 ft. by 50 ft. gives 16 trees per acre.
60 ft. by 60 ft. gives 12 trees per acre.

BUDS AND GRAFTS

Buds, grafts of nut and fruit trees, grape cuttings, propagating tools and supplies, together with other items if interest to my customers will be offered in my spring catalog which will be ready for mailing out by February 15th. If interested just mail me a post card saying, "Please send me your spring catalog."

WALNUTS Double The Value of Your Land

Grande English Walnut. Sure you can grow these right in your back yard.

WILSON WONDER: Called the "Jumbo Walnut" because of its enormous size, The individual nuts often measuring more than 2 inches in diameter. Offered in the stores at Christmas time for fancy prices. Makes a beautiful shade tree that bears young.

PRICES ON ALL WALNUTS

(8-10 ft. bearing size)	5.00	4.25

Special prices on 100 trees and up

Wolfe's GRANDE: The newest nut for the Southwest. Texas and the Southern States can now grow genuine thin shell English Walnuts. As the photograph at the left shows, Grande is a beautiful yellow English Walnut. It originated on the Rio Grande River near El Paso from a seed of the hardy French variety, the Franquette. Grande is a novelty and is ready for commercial purposes in the Davis Mountains and in New Mexico. You will treasure it as one of the best in your collection.

Most Outstanding Qualities of Grande

1. The tree grows rapidly and makes a beautiful shade tree for the home. Making it so distinctively attractive, are its huge light green leaves and bright green- gray bark.
2. Bears very young—even the second year.
3. Heavy producer of high quality nuts.
4. Cracks easily with the big tasty kernels coming out in halves.
5. Grande is a Christmas and Holiday favorite.
6. By far the best English Walnut for sections 2, 3, 4. High altitudes.

LET US PRUNE YOUR TREES READY TO PLANT. NO EXTRA CHARGE.
CONTINUING THE WORK OF MUNSON, RISIEN, AND STUBENRAUCH

Wolfe's THOMAS BLACK WALNUT

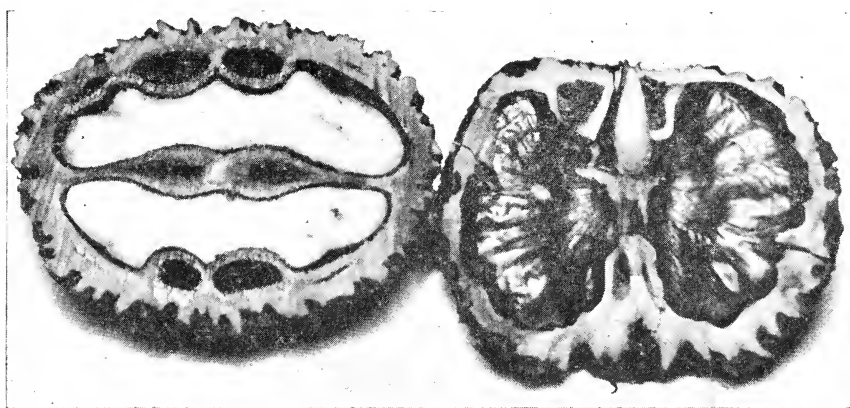

A Record Bearing Strain

THOMAS BLACK WALNUT. Another one of our BABIES. It is the most talked about NUT in all our shows. As the picture below shows, it is a thin shell Black Walnut with kernels in halves—bigger than any pecan kernel. Remember the little walnuts you used to eat down on the creek? (starve to death eating them) Thomas Black has the same, tender delicious flavor—and retains the delicate flavor in ice cream or when cooked in cakes or candies. The giant nuts keep fresh from one year to another. The green walnuts on the tree are nearly as big as baseballs (as you can see on the young bearing tree on the right). Frequently, young trees in the Nursery row are loaded down with nuts. The trees are strong and grow rapidly in almost any soil and require very little moisture. Makes an excellent, quick growing SHADE TREE that will help pay the taxes on the Old Home Place. We have never been able to supply the demand. Adapted to sections (ANYWHERE) Frost-resistant.

Prices on page 16.

Characteristic of Wolfe-grown trees, Thomas Black shells down the goods in its infancy. How's this for a 2-year top?

YOU DON'T BELIEVE IT?

... Well, look again. Yes, its Thomas Black and Ready to eat. Note the open sutures in the shell that make it easy to crack. Take a peek at those big kernels ... Yum-yum.

Order Early and Beat the Big Rush!

Wolfe's HOLLAND APPLE

Have an APPLE

It's a big HOLLAND grown on Wolfe's young bearing apple trees. You can grow apples just like these in my basket.

SOUTH'S HORTICULTURAL WONDER

"The Doctor's Apple"

A Delicious Large Red Summer
\$ APPLE .00 that is a real Money Maker

See it in color on page 47

Wolfe's Have Exclusive Rights on Holland

This Horticultural Wonder from Weatherford, Texas was called to my attention by Mr. R. B. Alexander, the largest and most successful fruit grower in Texas. For more than 30 years, Holland has been a consistent and heavy producer. This large-red Summer Apple is a sight to see in production. It shines like a Red-bird on the tree. Words can't describe its beauty. Holland has three outstanding commercial advantages: (1). The fruit is firm—good packer and shipper and one of the most delicious apples grown. (2) It ripens as early as Frank peaches and is on the market before outside apples are shipped in. (3) It hangs on the tree exceedingly well, giving the grower a longer selling season. Holland is adapted to sections 2, 3 and 4.

Home Garden Fruit Collection

This collection of choice and easily grown fruits gives the owner of a small plot of ground a wonderful opportunity to enjoy home grown fruits. No purchased fruit, no matter how tempting, can equal in flavor and satisfaction, fruit picked from your own trees. From summer until late fall, as each variety ripens, a new pleasure awaits you.

1 Cluster Apricot, 1 Moorpark Apricot, 1 Mayflower Peach, 1 Smith Honey Peach, 2 Texaberta Peaches, 4 Frank Peaches, 1 Indian Peach, 2 Surprise Peaches.

HOLLAND APPLE . . . puts Texas in Competition with Northern Apple Growers

Wolfe's SELECT APPLES - - *Paving the way to Money Crops*

Texas is rapidly pushing to the front as an apple state. The Varieties we offer are all proven in our experimental orchard.

DELICIOUS: I raised Delicious Apples this year that weighed nearly one pound. I don't think I ever tasted a better flavored Delicious raised anywhere. Ripe in September and October. Sec. 2, 3 and 4.

JONATHAN: The Jonathan Apple is not so large but it makes up for this in color, quality and heavy bearing. It gets ripe in this section in September. Sec. 2, 3 and 4.

KING DAVID: Mr. J. Frank Browning of Baird, Texas, who has the largest Apple Orchard in this section, places the King David at the top of the list. These red apples which get ripe in August sell like hot cakes. King David and Golden Delicious are good pollinators for Delicious. Sec. 2, 3 and 4.

GOLDEN DELICIOUS: This Apple is just like Delicious except it is a golden yellow; it is a good keeper. Yellow Delicious will make you money. Sec. 2, 3, 4.

YELLOW TRANSPARENT: This mellow, yellow apple really gets ripe about June 10th. The trees are very prolific and the apple is good for cooking and for early market. Sec. 1, 2, 3 and 4.

DOUBLE RED DELICIOUS: The Double Red Delicious is just like Delicious except it has more color. \$5,000.00 was paid for the original limb. I have the genuine stock. George Robertson of Goldthwaite, Texas sold 25 bushels of Delicious from one tree this year for \$25.00, proving "Money Does Grow on Trees."

BUY WITH CONFIDENCE AT WOLFE'S NURSERY

Wolfe's CRAB APPLES *The Apple for tasty jellies and apple butter*

TRANSCENDANT CRAB (Siberian)
Ripens in July. An Attractive yellow color, splashed and striped with red; bears very young. We value it highly for preserves. Buds and blossoms exquisitely beautiful. Sec. 2, 3 and 4.

DALGO CRAB: Most beautiful flower and fruit of all crab apple. I got this from the old Experimental Grounds of T. V. Munson, Denison, Texas. Flowers are extra large and white and the apples are lavishly marked with red. The best of all crab apples for jelly. Sec. 2, 3 and 4.

CONFIDENCE - - - *Would You Buy Without It?*

You can buy from Wolfe's Nursery with confidence. Why? Because Wolfe's Nursery is backed by 21 years of dependable service and the experience of 3 world-famous breeders—(E. E. Resien, J. W. Stubenrauch and T. V. Munson.) We do not operate a "fly-by-night" business. Our ambition is to grow with America and serve with America. The business will be passed on down from father to son. To fulfill this dream, I must keep building on a solid foundation. I must tell you the true story without exaggeration. During my experience as a nurseryman, I have turned down many big orders because I knew that the prospective customer's land was not suited for commercial purposes. I would refuse your order on the same basis. By helping you make money, as I have many, many customers, I will build a following that will keep Wolfe's Nursery out in front. I can sell just as cheap as any nurseryman, but would that be fair to you? My job isn't through when a sale is made. I must help you with any problem that comes up. Too, I can grow stock just as cheap as anyone, but you want good

stock. It pays. One of our iron clad rules is to grow **Stock Up To A Standard. Not Down To A Price.** If you are an old customer, you know this to be true. Meet the Wolfe's on page 24-25.

Wolfe's ALLRED PLUM

Beautiful to See
Delicious to Eat
Easy to Sell

See it in colors on page 47.

* **THE ALLRED PLUM** is a find resulting from my never ending quest for novel and finer fruits for the South. The Mother Tree is growing in Hot Springs, Arkansas, and was brought there from Europe about 12 years ago.

ALLRED is beautiful to see because of its bright purplish-red leaf and flame-red fruit—delicious to eat because of its sugar sweet juice and distinctive flavor—easy to sell because it attracts the eyes like a passing parade. Allred is medium in size—highly ornamental and produces regular crops of high quality fruit. Many of the trees are used in landscaping. Sec. 2, 3, 4.

SPECIAL PLUMS (NEW)

Heavy and Early Production from Wolfe's Super Trees.

NOTE: The Bruce Nursery of Alanreed, Texas has given Wolfe's Nursery exclusive rights to propagate Bruce, Jr., Bruce and Donley. All these Bruce and Six Weeks were originated by Mr. A. L. Bruce.

* **MRS. BRUCE. \$\$\$\$.** This fine new variety combines hardness and productiveness of the native sweet Chicasaw. It is adapted to a wide range of soils and climates. Thoroughly tested and proven to be superior to any plum ripening with Six Weeks, makes it a commercial hit. Mrs. Bruce is medium, large in size, yellow overlaid with bright red and very sweet. Blooms late. Sec. 2, and 4.

— **BRUCE JR. \$\$\$\$.** This new plum is very large and productive. We consider it better than Bruce. It ripens 20 to 30 days later than Bruce. The big sweet plums are yellow-splashed with red. It is a sure commercial variety. Bears young. Sec. 2, 3, and 4.

* **DONLEY. \$\$\$\$.** Is the surest bearer. Blooms late and is a sturdy, hardy, prolific tree. Medium size, yellow overlaid with pinkish red and has a fine sweet flavor. The fruit ripens uniformly and is a very profitable variety. Sec. 2, 3 and 4.

* **RED ACE. \$\$\$\$.** Free from canker. Giant red fleshed plum. Full of sweet sugar juice. Firm, small and highly productive. Ripens 20th of June. Sec. 2, 3, and 4.

See Section Map, page 10.

Pleasure and Profits from Your Fruit Garden

Wolfe's PLUMS and CHERRIES

Easy to Grow - STANDARD PLUMS - *Easy to Sell*

AMERICA. \$\$\$\$. Tree very thrifty, symmetrical, spreading, fruit medium to large, bright golden ground with pink cheeks, flesh firm, stone medium to large. Clingstone. Ripe June 20th. Sec. 2, 3, 4.

BURBANK. \$\$\$\$. Large, clear purplish-red, flesh deep yellow, sweet flavor. Very prolific. Ripens June 25th. Prune Burbank each year for the best results. Sec. 2, and 3.

SHIRO. \$\$\$\$. One of the most desirable plums over a wide area. Large to very large, oblong clear, transparent yellow, with small seed; firm and fine texture, quality unsurpassed for eating and for cooking purposes. Ripe in July. Sec. 2, and 3.

SIX WEEKS. \$\$\$\$. The earliest good plum on the market. Large, rich red and delicious. Ripe May 20th. Sec. 1, 2, 3 and 4.

BLACK BEAUTY. \$\$\$\$. Very sweet and almost black when fully ripe. Medium in size and ripe July 1st. Sec. 2 and 3.

METHLEY. \$\$\$. This red plum is red-fleshed and is more than three inches in circumference. It was introduced from South Africa. It ripens May 25th and is growing in popularity as a good market variety. It is an extra good shipper. Sec. 2 and 3.

GOLD. \$\$\$. Similar to America but larger and sweeter, ripening July 1st. Sec. 2, 3 and 4.

BRUCE. \$\$\$\$. Large, red, productive. Early ripening, firm shipping quality, productiveness and deliciousness of flavor. Sec. 2, 3 and 4.

PLUM CHERRY

HANSKA. \$\$\$\$. The fruit is red with an apricot flavor and almost a freestone. Fruit is frequently double and will hang on the tree a long time after it is ripe in July. Sec. 2, 3 and 4.

SAPA. \$\$\$\$. Extra heavy producer. Tree dwarfish, thrifty and often sets fruit at one year of age. Fruit large, dark purple, with greenish splotches, flesh, rich dark purple red, rich flavor with small pit. Ripe last of June and the best jelly plum on the market. Sec. 2, 3, 4.

OPATA. \$\$\$\$. Also an extra heavy producer. Tree very beautiful when in bloom and fragrant. Fruit medium, purplish-red, splashed with green, flesh green and very fine flavor. Clingstone, ripening the last of June. Sec. 2, 3 and 4.

COMPASS. \$\$\$. Tree a vigorous grower, hardy, prolific and bears extremely young. Fruit rather small, dark red. Ripe in June. Sec. 2, 3 and 4.

CHERRIES

HANSEN BUSH. \$\$\$\$. The fruit is dark red and is excellent for jelly and jams. This little cherry originated in South Dakota, is frost resistant, sure and abundant bearer. Sec. 2, 3, 4. (In 1 and 2 foot grade only).

MONTMORENCY. \$\$\$\$. Bright red, delicious flavor, firm-fleshed for preserves, cobbles and puddings. The greatest American canning cherry. Tree hardy, disease resistant, less affected by wet weather. Young sure bearer. Sec. 3, 4 and north part of 2.

EARLY RICHMOND. \$\$\$\$. Leading early sour cherry. Ripens June 15th. Fine for pies. Be sure you have some of these trees in your orchard. Sec. 3, 4 and north part of 2.

PLANT EARLY FOR BEST RESULTS . . . BETWEEN NOV. AND APRIL

Wolfe's BIG SIX NEW FRUITS - 1941 Models

RED NECTARINE. \$\$\$. The Nectarine is a bud sport of the peach, and is not a cross. The Nectarine Tree is identical with the peach tree and its climatic and culture requirements. Its smooth fuzzless skin, however, and distinctive and delicious flavor make it popular wherever it is known.

The fruit is medium sized, red in color, semi-cling of extra food flavor. Tree a medium grower and good bearer, earliest of the shipping nectarines. Carries well to market. Ripe in late June. Sec. 2, 3, 4.

GERMAN PRUNE. \$\$\$\$. This is a cross between a plum and prune that will bear fruit in Texas. Blue-Black color with reddish meat and very small seed. Fruit is delicious and is good for jelly, canning and preserves. Ripens from July 10th to 20th. Sec. 2, 3 and 4.

STANLEY PRUNE. \$\$\$. While visiting a fine orchard in Central Texas, I saw a tree that looked like it had blue morning glories in bloom. On approaching it, I found what looked to be flowers was fruit, some of the largest and finest prunes I have ever seen. This is the new Stanley Prune bred and introduced by one of the fruit experiment stations. I only have a few trees so rush your order before they are all gone. Sec. 2, 3 and 4.

SANTA ROSA PLUM. \$\$\$. One of the largest and most beautiful plums. This is the leading commercial plum in Southern California, well adapted to Texas and climates that are similar. Purplish red inside and out and delicious. Sec. 2, 3, 4.

PLUMCOT. \$\$\$\$. (Half plum and half apricot) The skin of this new and valuable fruit is the color of Burbank Plum with a combined flavor of plum and apricot. A perfect freestone. Ripens July 1st and will hang on the tree for 30 days. You should include one of these in your planting. Sec. 2 and 3.

WOLFE'S MUNSON PLUM. \$\$\$\$. When I tasted the Munson Plum, I said it is as sweet as honey and as yellow as gold. It gets ripe June 1st when the berries are at their best and should be in every planting. This is our greatest plum find. Sec. 1, 2, 3 and 4.

Wolfe's DOUGLAS \$\$\$\$ PEAR

As Good As It Looks

See Douglas in Color Page 47

Most outstanding features of the Douglas Pear are its early and heavy bearing. Frequently, young two and three year trees will be loaded with big soft juicy, delicious pears. Douglas is one of the best eating pears on the market and is sold at fancy prices Good to eat right off the tree.

It is blight resisting which insures big healthy-vigorous trees. The fruit ripens the later part of August. Sec. 1, 2, 3 and 4.

The markets are never crowded with choice fruits, especially choice pears.

KIEFFER. \$\$\$\$. Fruit large to very large, skin yellow, with a light vermillion cheek, flesh brittle, very juicy with a marked mushy aroma, quality good, matures from September to October. Tree vigorous and very prolific. Begins to bear at four years old. Sec. 1, 2, 3 and 4.

BARTLETT. \$\$\$. Large, buttery, melting, rich flavor. Very popular. Ripens last of July and during August. Adapted to dry sections. Sec. 4.

GARBER. \$\$\$\$. Resembles the Kieffer in size, appearance and quality, but matures here in August and between the Le Conte and Kieffer. A THRIFTY grower and valuable variety. Good to eat. Sec. 1, 2, 3 and 4.

Wolfe's Douglas needs help to hold up the fruit.—three-year tree.

SUCCESSFUL GROWERS Started With Good Trees . . . From a Dependable Nursery

Wolfe's PERSIMMONS - *Make a dish fit for a King*

Eureka—Producing 28 big persimmons in the nursery. Wolfe's System makes them bear young.

DID YOU KNOW?

... that Oriental Persimmons originated in China and that they are one of the most delicious and healthy fruits grown? They are rich in fruit sugar, vitamin C and valuable as a laxative. The fruit hangs on until after frost and is more beautiful than oranges and delicious to eat out of the hand or in deserts or ice cream. There is a good demand for the fruit and the large persimmons that are in bearing are making big money. Set your trees 20 ft. apart.

TANE NASHI. If you want the finest quality to be had in a persimmon, plant Tane Nashi. The fruit is very attractive and looks just like a picture. I have one year old trees of this variety that are producing several fruits. It demands the highest prices of all the persimmons I raise. Sec. 1, 2, and south part of 3.

DATA MARU. This is my largest persimmon and the first to ripen. The fruit is yellow and one of the largest grown. I grew 60 of these fruits last year that measured one bushel. Sec. 1, 2, and south part of 3.

PRICES ON PERSIMMONS

Size	Each	50 or more
1-2 ft.	.30	.28

4-5 ft.	.70	.65
(5-6 ft.	.95	.88

—bearing size)

Special price on 100 or more trees.

EUREKA. If you like your persimmons soft, you will want to plant the popular Eureka. Every year people are enjoying ripe Eureka with sugar and lemon juice—a dish fit for a King. The Eureka is a hardy variety with fruits which look like a big red tomato. Our strain of Eureka is almost seedless. Ripe in Nov. and Dec. Sec. 1, 2, and south part of 3.

APRICOTS THAT BEAR

By planting Improved Cluster and Moorpark Apricots you can have apricots ripening for a month. We have the surest bearing apricots to be had. They bear young. Do best in yards and uncultivated soils.

IMPROVED CLUSTER \$\$\$ I believe this is a seedling of Cluster. It bears like Cluster, yet has no objectionable fiber. Ripe June 4th. Sec. 1, 2, 3, and 4.

MOORPARK \$\$\$ I like the Moorpark on account of its bearing, size and quality of fruit. Delicious, yellow flesh, large and of the very best quality. Sec. 1, 2, 3 and 4.

Wolfe's FIGS - - - Luscious Fruit First Year

It is almost unbelievable to think that Ramsey Figs will produce from 100 to 150 fruits in the nursery row the first year. It's true. Just plant some near a building, water hydrant or where they will get plenty of water and they will do the same for you. A few plants will furnish all the luscious figs your family can use—for eating fresh or for making preserves.

RAMSEY: Ripens its fruit from July until frost. This variety bears on the new growth and with good care it will produce enough the first year after planting to pay for the plant. The fruit is from light straw to brown in color, medium size and very sweet. It does not crack easily. La Union Orchard of Grand Prairie has four acres in this fig that made \$1,600 in one year. This variety is good for preserving and for fresh eating. Sec. 1, 2 and 3.

CELESTIAL: Ripe in July. The common little blue fig. None is sweeter. Very hardy. Sec. 1, 2 and 3.

MAGNOLIA: It is not necessary to plant two varieties of figs for good results. The Magnolia produces large brownish straw-colored fruit and will bear the first year after planting. Plant some of this variety. Sec. 1, 2 and 3.

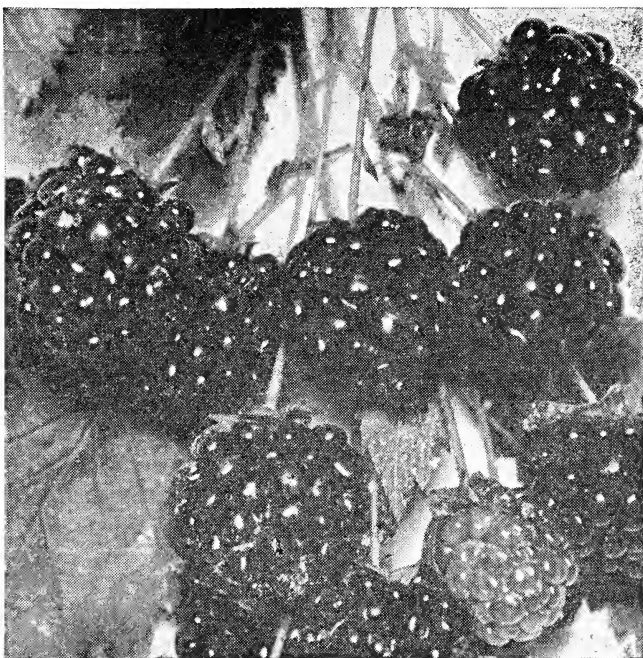

PRICES ON ALL FIGS

Size	Each	50 or more

3-4 ft.	.55	.50

Wolfe's DEW-BLACKBERRY - - - Early Wonder

(Wolfe's Introduction)

Actual photograph. Some of the berries one inch in diameter. The Dew-Blackberry is far superior to any berry I grow. This berry is a cross of the dewberry and the blackberry as the name implies. The tips will root the first year, after that it stands and handles like a blackberry. Sec. 1, 2, 3, 4.

WHY DEW-BLACK IS A

Money Maker

Small Seeds, Self Fertile, Large as Austin Dewberry, No bitter taste like Dallas, Commences to ripen May 20th and ripens for 5 weeks, Produces a crop every year, Drouth resistant. Will produce 1,000 to 1,400 gallons of fruit per acre. Easy to grow.

Wolfe's Famous Dew-Blackberry—\$175.00 PER ACRE from this berry.

PRICES

1 to 50.....8c ea. 50 to 100.....7c ea. 100 up.....6c ea.
Plant 6x6 ft.—1210 plants per acre.

PLEASURE AND SECURITY FROM YOUR FRUIT GARDEN

\$175.00 AN ACRE FROM Wolfe's BERRIES

EASY MONEY FROM BERRIES—just put some of your idle land to work and it will put coin in the bank. The demand for good berries is increasing each year.

BOYSEN BERRY: Boysen Berries are Money Makers. In 1935 I visited the famous Knott Berry Place at Buena Park, California, and saw a large acreage of Boysen Berries in full bearing. Ripe June 20th. He has written me since that he has gotten 11,500 pounds of Boysen Berries per acre. The berry looks like a Youngberry and has a very similar flavor, but the fruit is twice as large, single berries frequently measuring 2 inches long. Mr. Knott realized \$1,760.00 per acre from these berries in 1934. Sec. 2, 3 and 4.

The Boysen Berry plants have been very high, 20c each, but since I am growing these plants myself, I am able to offer them at a much cheaper price.
1-50....10c 50-100....8c 100 up....7c

AUSTIN DEWBERRY: This is the hardest and most prolific dewberry and is the very first berry to ripen. Sec. 2, 3, and 4. PRICE 3 cents each.

PARKER (thornless) Youngberry: This is a cross between a dewberry and a longberry, originating in Louisiana. Its popularity is growing rapidly in Texas and Oklahoma. As people know this berry, its planting will increase by leaps and bounds. Sec. 2, 3, 4. Price same as Boysen Berry.

"I made \$175.00 PER ACRE from this patch of WOLFE'S DEW-BLACK BERRIES"
A. H. Montgomery, Stephenville, Texas.

Wolfe's GRAPES - - Put your idle sandy land to work ... and Make It Pay!

VINEYARDS, ARBORS and PERGOLAS

COLUMBIAN: One of the largest grapes grown. Light wine color and delicious to eat. Very prolific.....\$1.00 each

Yes, its grapes alright—Twelve of these Columbian Grapes measure one foot.

All Grapes on this page are SPECIAL

THOMPSON SEEDLESS: vigorous grower. Berries small, greenish white, large compact bunches. Adapted to Southwest Texas. An excellent table grape. Sec. 4.

VIOLET CHASSELAS: (European grape) Vigorous grower. Large violet clusters of excellent quality. If sprayed will do well throughout the South. Adapted to Pecos and El Paso sections.

ZINFANDEL: New California Grape, bearing and doing well for Mike Boyd at Ballinger, Texas. Bunches compact, very black and are heavy producer. Fine for wine and jelly. Sec. 4.

WINE KING: Self fertile. Small violet berries with thin skin, tender and juicy pulp. Long clusters. Ripe August 1st. Best Wine Grape and free from disease. Sec. 2 and 3.

GOLDEN MUSCAT: Productive grower. large clusters, compact, sweet and tender. Ripe after Concord. Sec. 2, 3.

JAMES SCUPPERNONG: Has delicious, musky odor and taste. Berries large golden color. Makes delicious wine. Plant 16 ft. apart. Plant one male to ten female. Sec. 1 and 2.

C A C O: A cross of Concord and Catawba. Most delicious flavor. Fair size bunches of large pink fruit. Ripe July 10. Sec. 2 and 3.

ELLEN SCOTT: Self fertile. Stocky, vigorous grower, berries large to very large. Violet color. Skin does not crack. Excellent flavor. Sec. 2 and 3.

GOETHE: Vigorous vine with pale pink berries which are large. Fine flavor. Ripens late. Sec. 2 and 3.

GUMERA: Perfectly adapted to our climate. Berries very large, purple, thin skin with few seed. Bunches extra large, weighing up to three pounds. Sec. 4.

WHITE MUSTANG: (Our introduction, 1939) This is just like the Mustang except the fruit is white. It is very difficult to root and I have only a few plants of 2-year-old. They will grow from 50 to 75 feet long and produce several bushels of grapes. Makes a clear wine of unusually good quality. Sec. 1, 2 and 3.

PRICE:	each	50 or more
	medium	35c 30c
	large	50c 45c

GRAPE ARBORS provide a dainty, picturesque nook, or too, a screen for an undesirable view while providing one of nature's delicacies.

Wolfe's MUNSON GRAPES

WORLDS FAMOUS

I have bought the Munson Vineyard of Denison, Texas, and now have America's finest Grapes to offer you. Mr. Munson tested over a thousand varieties of grapes and originated more than sixty kinds. The celebrated Munson Grapes are favorably known not only in the Americas but all over the civilized world. The Government of France conferred on him a cross of honor for his work. We are continuing his work.

T. V. Munson

Select Grapes

ALBANIA: Self fertile. —White wine grape. White skin and tough. Clusters large, compact. Latest white grape and near the best. Specially adapted to West Texas. Sec. 3, south part of 2, 4.

AMERICA: Plant with Beacon or Concord. Growth very strong. Bears heavily with long arm pruning. Berries black and medium size. Adapted to all sections. North and South. A splendid wine grape and good for the table when fully ripe.

ARMALAGA: Self fertile. Vine very prolific. Large yellowish white berries. Clusters large to very large. Quality of the best. Especially adapted to the Gulf Coast area. Ripe August 10th. Sec. 1, 2.

BACHMAN'S EARLY: Vigorous grower. Quality of the very best. Berries and clusters large. Fruit black. Ripe in early July.

BAILEY: Self fertile. Very strong grower. Large black berries. Clusters large. Good quality, well adapted to South. Central and Southwest. Ripe August 20th. Sec. 2, 3, and 4.

BEACON: Self fertile. Extra good grower. Berries large and black. Clusters compact. Skin never cracks. Ripe here July 25th. Very fine for jellies. Sec. 2, 3 and 4.

BELL: Vigorous, healthy vine. Sure producer. Greenish-yellow, medium compact clusters. Free from Mildew and leaf folder. Ripe July 20th. Sec. 3.

BLACK SPANISH: Prolific. Clusters open but large with small berries. Fine for wine. Well adapted to the Southwest.

BRIGHTON: Plant near Brilliant. Vine vigorous. Berries large, bright red. Clusters large and compact. Thin skin, tender pulp. Fine quality. Ripe in July. Sec. 2 and 3.

BRILLIANT: Strong growers, self fertile. Berries large, color light to dark red. Large clusters and very delicious. Ripe July 10th. Sec. 2, 3 and 4.

CAMPBELL'S EARLY: Large clusters with black berries. A rather light grower but better than Concord. Ripe in July. Sec. 2 and 3.

CARMAN: Blue-Black with large bunches. Self fertile and very prolific. Immune to leaf folder and mildew. Strong grower. Berries never crack. Good quality. Sec. 2, 3 and 4.

CATAWBA: Self fertile. Found in 1801 in North Carolina. Vine vigorous. Berries medium, clear dark-red with exquisite flavor. Fine table and wine grape. Sec. 2, 3, 4.

CHAMPANEL: Black berries with tough skin, tender pulp. Adapted to any soil but especially adapted to black waxy soils. Ripe with Concord. A good shipper and withstands dry hot weather. Sec. 2, 3, 4

"THE FOUNDATION OF AMERICAN GRAPE CULTURE"

Written by the late T. V. Munson. 252 pages with 87 full page illustrations: Information for growing grapes, preparation of soil, planting, cultivation, and pruning. Contains references to all the best known varieties grown on this continent and of the best known imports. You cannot afford to be without this book.

REDUCED PRICE IS \$1.50 PER COPY. POSTPAID

BUY WOLFE'S NURSERY STOCK WITH CONFIDENCE

CLOETA: Self fertile. Very vigorous growth. Medium size berries, large black clusters. Fine for wine. Section 3.

PORTLAND: This is a new grape coming from the Experiment Station at Geneva, N. Y. Fruit is very delicious and the plant is an extra good grower. Section 3.

EDNA: Should be planted with Ellen Scott or Armalaga for pollination. Strong healthy vine. Fruit white with a delicious muscat flavor. Section 2, 3, 4.

EXTRA: Strong growing vines with medium black berries. Very juicy and hangs on vine late. Ripe August 10th. Excellent for wine, jellies and juices. Sections 2, 3, 4.

FERN MUNSON: Fruit large, color red with fine flavor. Ripens late in August and hangs on the vine until frost. Section 3.

FREDONIA: Strong growing vines and very hardy variety. Large tapering clusters. Quality very good and is fast growing in popularity. Section 3.

HEADLIGHT: Should be set near Beacon or Carman for pollination. Medium clear red berry, very sweet. Ripens later part of June. Sections 1, 2.

HERBEMONT: Healthy and long lived. Prolific. Fruit dull brownish red, small and juicy. High in both sugar and acid content. Ripe three weeks ahead of Concord. Sections 1, 2.

LONGFELLOW: Prolific, large black berries clusters long up to 12 inches. One of the most attractive grapes. Adapted to all types of soil. Sections 1, 2, 3, 4.

LAST ROSE: Large rich red berries in compact clusters. Thin, tough skin and tender flesh. Excellent quality. Ripe in September. Sections 3, 4.

LOMANTO: A valuable variety for limy soils and dry hot weather. Resistant to root rot and well adapted to the coastal section. Sections 1, 2, 3, 4.

MANITO: Black berries with white specks. Pulp tender and sweet. Should be planted with Brilliant. Section 4.

MERICADEL: Very productive. Berries medium with thin tough purple skin. Large compact clusters. Sections 2, 3.

MINNIE: Large white grape Extra good flavor. Best quality. Sections 2, 3.

MISSION: One of the very finest table grapes which is growing more popular each year. One of the European grapes. Section 4.

MOORE'S EARLY: Large black grape. Early and prolific. Ripe in July. Section 3.

MUENCH: Free from diseases. Large purplish grapes which should be in every vineyard. Section 3.

R. W. MUNSON: Fruit black, bears heavily and one of the very best commercial varieties. Sections 2, 3.

NIAGARA: Good quality which is very popular throughout the South and Southwest. Berries large. Sections 2, 3.

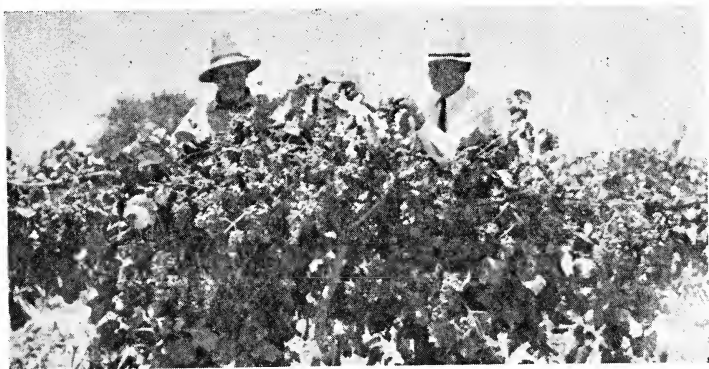

CONCORD: One of the best known grapes for market and juices. Very popular in Arkansas. Section 3.

PRESIDENT: Strong prolific grower, Medium clusters that ripen with Moore's Early. Best of quality. Sections 3, 4.

"My 3 Acres of Grapes Made 900 Bushels and Sold for \$450.00—Planted on My Poorest Sandy Land."—W. H. Smith, De Leon, Texas.

HELP TO PLANTERS

ORCHARD LOCATION

Peaches, plums and cherries do best on hillsides. Grapes, pears, apples, pecans and berries will do well on both upland and lowland. Fruits that ripen late, like late peaches, pears, apples and pecan should be planted on drought resistant soils.

DISTANCES FOR PLANTING

Peach, Plum, Apple, Pear and Apricot 20 to 30 feet apart each way		Number of Trees or Plants Per Acre
Pecan	35 to 60 feet each way	4 by 6 feet 1,815
Figs	12 by 12 feet each way	5 by 5 feet 1,740
Blackberries	4 by 6 feet each way	5 by 10 feet 870
Boysenberries and Youngberries	5 by 10 feet each way	12 by 12 feet 302
Dewberry	4 by 4 feet each way	12 by 18 feet 291
Strawberry	1 by 1½ feet each way	20 by 20 feet 108
Grapes	12 by 12 feet each way	25 by 25 feet 69
		30 by 30 feet 48

CARE OF TREES ON ARRIVAL

Trees should be unpacked on arrival and either planted or set in a trench and watered. If dry, put roots in water from 2 to 4 hours. Do not expose roots to drying wind and sunshine. If frozen on arrival, bury the entire bale under ground until weather moderates.

PREPARATION OF LAND

Plow and harrow land before planting. Check land at desired distances and dig fruit tree holes 2 ft. wide, 18 inches deep and other holes in proportion to size of root system. It pays to care for your trees.

PLANTING

Prune all broken or brused roots back for healthy growth. Plant trees an inch deeper than they originally grew. Use loamy top soil in filling the hole and water all the ground will take. This settles the soil around the roots. Lean trees slightly to the windward direction. Plant bulbs from 4 to 6 inches deep.

PRUNE TOPS

Better live, shape and growth is gotten by cutting tops back 2-5 at planting and with roses more than one half. Later pruning can be done at any time of year, cutting back branches that out-grow the rest of the top and removing branches that grow too low. No injury will come from cutting 25% of leaves from tops during the growing season. Paint large wounds with orange shellac and then use house paint. Roses and flowering shrubs bloom better if blossoms are pruned off before seed are matured. Evergreens should be pruned anytime to preserve shape and size desired.

BALLED AND BURLAPPED

Handle Balled plants with ball and not by holding tops. Plant balls without removing the burlap, so that the sack is below the ground. Do not break or crush the balls.

PROTECT FROM FROST

If orchard soil is kept fertile and cultivated thoroughly with shallow tillage through the spring, summer and fall season, the trees will remain dormant later in the spring and escape late frosts. Watering trees or evergreens in yards will help prevent injury from cold.

COVER CROPS

Oats or other small grain drilled in the fall with hairy vetch makes an ideal cover crop to protect the soil from wind and water erosion. This cover crop may be disced into the soil about May 1st which will enrich the soil. Clean, cultivate in the summer.

YELLOW LEAVES AND ROSETTE

Use copper in soil, 4 tablespoonfuls for shrubs, rose bushes or grapes and corresponding amounts for larger trees. One pound of Zinc Sulphate to 50 gallons of water will control Rosette on pecan if sprayed on the trees when leaves are half grown. Repeat the same spray 2 weeks later.

ROOT ROT

There is no cure for root rot. It occurs in spots mostly in lime soils. Pecan, walnut and live oak are largely immune to this disease.

RABBIT CONTROL—To help keep off Rabbits

2 lbs. Sulphur, 2 lbs. Yellow Ochre, 1 gill Turpentine, 1 gill Linseed Oil, ½ pint flour. Make into a paste with sweet milk. Apply with brush in fall or as soon as trees are put out.

SUNSCALD

In addition to pruning too low-headed trees, it is advisable to wrap trunks with paper or burlap or whitewash them. This will prevent sunscald.

I make my own whitewash to protect trunks of newly set walnut and pecan trees. This same whitewash may be used on other trees also.

Quicklime	30 lb	Tallo	4 lb	Salt	5 lb
-----------------	-------	-------------	------	------------	------

(Add water to make a thin paste)

FERTILIZER

Moderate amounts of manure (applied in winter) or commercial fertilizer will help growth, color and production of flowers and fruit. Apply evenly in the soil in area twice the spread or height of tree or plant to be fed.

TO MAKE ACID SOIL

Add peat moss and good leaf mold to the soil.

POLLINATION

Bees and insects do this for you. Always put some early and some late pollen shedders in pecans. Almost any other peach or apple will pollinate, Hale Peach or Delicious Apple.

DISEASES

You can get a complete spray schedule for controlling wormy peaches, codling moth in apple or pear, black rot on grapes, case bearer in pecans, leaf spot on roses, flies on arbor vitae, bagworms, borers, brown rot and other diseases and insect pests by consulting your County Agent or Home Demonstration Agent or write The Extension Dept. A & M College. If you fail to get this help from them, write us. We want your planting to be a success.

AGES OF BEARING, AFTER PLANTING

Peach, Plum, Nectarine, 2 to 3 years; Pear and Apricot, 3 to 5 years; Apple, 3 to 4 years; Pecan, 3 to 4 years; Blackberry and Dew Berry, second spring; Boysenberry, second spring; Strawberry, first spring; Grape, 2 years; Figs, first year; Walnut, 2 to 3 years.

PRIZE WINNER

Mr. John N. Garner Admiring Early Production from Pecans.

THE VICE PRESIDENT'S CHAMBER

WASHINGTON

April 1, 1933

Mr. Ross R. Wolfe
Stephenville, Texas

Dear Mr. Wolfe:

Your letter of March 29th is received, also the little bag containing four sample nuts from the old seedling pecan from San Saba, Texas, which won the first prize in Uvalde in December 1932.

I note your request that I give you permission to name this pecan "John Garner" and assure you that it is an honor which I greatly appreciate.

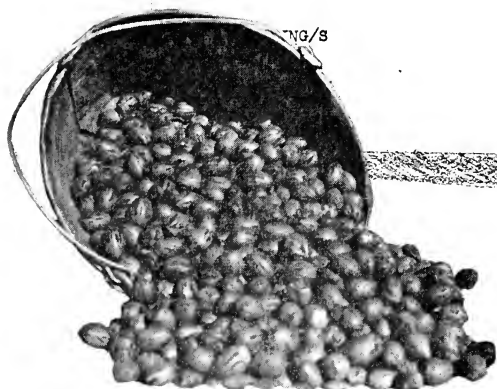

I am a "nut" myself on the subject of pecans, and I doubt if anyone is more interested in their culture than I am. My great regret is that I have so little time to give to it.

I shall see that these sample pecans are planted in my own orchard.

Again thanking you and assuring you of my great interest, I am

Very cordially yours,

John N. Garner

Wolfe's Farm Home

Build a setting around a home so natural it appears to have all grown up together. The result is a charming home which gives rare pleasure and contentment.

Over one hundred select varieties of Evergreens, Vines, Flowering Shrubs, Shade Trees, Hedge and Roses to pick from—the finest stock we have ever had to offer. We can Landscape the smallest Home or the largest Estate. We furnish cost information free and charge a very small fee for complete Landscape Plans.

Drive to the Nnrseriy—Select your plants.

A New Service

With the completion of a large plant seasoning House and Greenhouse, we are now able to deliver small Evergreens, Flowering Shrubs, Vines, Hedges and Roses the year-round.

Let our Landscape Artist help you.

. . . It is not a Home until it is planted.

Wolfe's SHADE TREES

The Background of a Landscape and Majestic Beauty

ELM, AMERICAN: Tall stately, beautiful branches spreading to lend grace to a shade. It often grows 60 feet tall

ELM, CHINESE: I have one of these lovely trees in my yard that is 35 feet high and has a spread of 40 feet. The trunk is 16 inches in diameter at the age of 13 years.

WEeping WILLOW: I have the true Babylonian with branches that hang straight down. Adds an airy touch to a low spot around your home. Plant where it will get plenty of water.

SYCAMORE, AMERICAN: This is one of America's most popular and satisfactory shade trees. It is hardy and resistant to root rot. Grows 50 to 60 feet high.

MIMOSA (Silk Tree): Has an umbrella-like top, feathery foliage and beautiful fragrant pink blossoms in the summer. The leaves fold up at night like a sensitive vine. This is one of our most beautiful trees and is hardy. (20c higher than other shade trees.)

CATAWPA: Beautiful shade tree adapted to a wide area of soils and climate. The leaves are bright green and extra large. Some of them are four and five inches across. Add to your color scheme with this distinctive shade tree.

LOCUST, BLACK: Popular for shade out where the west begins. The foliage is lacy and a deep green. It showers an abundance of white fragrant flowers.

MULBERRY, (RUSSIAN): A fast growing tree with an abundance of deep dark green foliage. Very desirable for planting in semi-arid sections such as Western Oklahoma, West Texas and Kansas.

MULBERRY, (HICKS): A strong upright, fast-growing shade tree with dense foliage, thriving anywhere. Bears good sized delicious black berries. A grand tree for BIRD LOVERS and splendid for chicken runs.

MAPLE, SILVER: A fast growing beautiful shade which is hardy in most soils. The leaves are light green, displaying their silvery white underneath. This combination of leaf color gives a unique effect. Easy to transplant and makes a well-shaded tree.

PECANS AND WALNUT TREES: Don't forget these beautiful fruitful trees. They make a wonderful shade and help pay the taxes on your Home. See pages 11 through 17.

CONIFEROUS EVERGREENS

Don't Keep Your Home Undressed

LINER SIZE (From Pots)

BERKMANS GOLDEN: A new dwarf, compact almost globular arborvitae with yellow-greenish foliage tipped with gold in spring. Grows to height of 6 feet. A background for the different "color scheme." 45c each.

BAKER'S PYRAMIDAL Arborvitae: Compact and pyramidal, with dark green foliage. Grows to 10 feet high. 45c each.

CEDRUS DEODARA: A pyramidal plant growing to a great height. Foliage bluish green with spreading branches. Beautiful plant, ideal for building Evergreen background. 45c each.

RAMSEY HYBRID: A type very distinctive for its open pyramidal shape with dark green, cypress-like foliage of soft appearance. Grows to 15 feet in height. 45c each.

YOU CAN SAVE

On Balled and burlapped size of Evergreens which are sold only at the nursery or from our sales yards at Brownwood, Weatherford, Ft. Worth or from W. M. Moseley at Breckenridge.

Evergreens grown in Wolfe's Nursery
Propagated by experts

BONITA Arborvitae: A globe-shaped, dwarf-growing plant with dark green foliage, grows 4 feet high. Lends a graceful touch to an entrance. 45c each.

ITALIAN CYPRESS: A tall columnar growing tree with soft, dark green foliage. Will attain 25 feet in height. Use with Pfitzer Junipers on corners and to build up tall lines. Price 45c each.

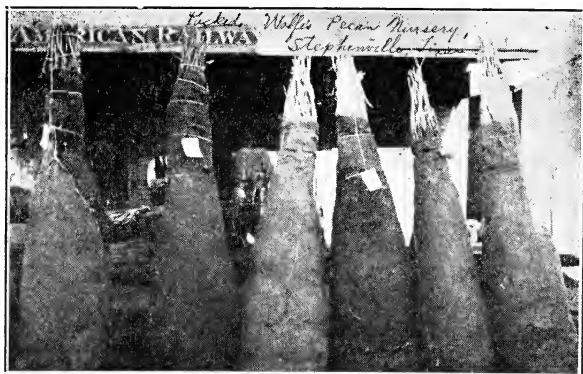

PFITZER JUNIPER: One of the handsomest and most popular low spreading junipers with beautiful silvery-green foliage. Ideal for corner planting and border filling. Price 45c each.

Wolfe's Trees and Plants are Packed Right

Wolfe's Broad-leaf EVERGREENS

Put on a green colorful winter coat

(Liner size from pots)

Pyracantha Barlow loaded with red berries.

ABELIA. A beautiful evergreen with glossy foliage that blooms from May until frost with a mass of fragrant white and pink flowers. Each 35c.

DAPHNE CENORUM. A very small dwarf evergreen producing an abundance of pink flowers in winter and at intervals throughout the summer. Each 65c.

EUONYMUS JAPONICA. A waxy, glossy, hardy evergreen that may be pruned or will cling to walls. Each 35c.

VARIGATED EUONYMUS. The yellow variegation is in the center of the waxy, green leaf. It has the same growth and habit as *Eunonymus Japonica*. Each 50c.

LIGUSTRUM JAPONICA. (Japan Privet.) A large, handsome, upright shrub with broad, dark green foliage and white flowers in loose panicles followed by black berries. Each 35c.

NANDINA. This beautiful and popular evergreen with bright red berries, with red leaves through cold weather should be in every planting. Use under windows and mix in with other plants for fiery beauty. Each 45c.

PHOTENIA. (Holly leaf type.) One of our most beautiful broad-leaved evergreens, grafted on hardy root. The leaves are dark, broad, long, with serrate edges. Beautiful white, fragrant flowers in the spring. Use to taper the lines and as a filler. Each 65c.

PYRACANTHA-Atalanyodes. United States introduction. Spreading shrub, leaves bright green and in winter covered with cluster of red berries. Use in backing the landscape. Gallon cans. Each 69c.

PYRACANTHA-Barlow. The grandest of all *Pyracanthas*, semi-upright in growth with profuse and enormous quantities of red berries which are produced the second year. Use for smart colorful contrast. Gallon cans. Each 63c.

SANTOLINA. (Lavender-cotton.) Low growing bordering plant with gray green foliage and yellow flowers. Each 30c.

LEUCOPHYLLUM. (Senisa). Silver-leaf. A Southwest Texas native shrub with silver leaves and lavender flowers. Each 65c.

JASMINE FLORIDIUM. This is the best of the *Jasmines*, having rich green winter foliage with yellow flowers from spring until frost. Each 35c.

Come to the Nursery For Balled and Burlapped Plants

BEAUTIFUL HOMES ARE WELL PLANTED

Wolfe's VINES - BULBS - HEDGE

VINES

QUEEN'S WREATH. A long slender vine that produces recimes of pink flowers on grape-like clusters. Mid-summer to Frost.

HONEYSUCKLE. A standard evergreen honeysuckle with yellow and white fragrant flowers.

VIRGINIA CREEPER. A lovely native American vine that is a fast grower. Leaves crimson in the fall. Cover-up plant.

ENGLISH IVY. An evergreen vine with thick grayish green leaves mottled with white. Clings to brick and stone.

SCARLET TRUMPET A rapid growing vine with flowers of orange red and trumpet shaped.

PRICES ON VINES

30c each 10 for \$2.50

HARDY HEDGE PLANTS

AMUR RIVER PRIVET. The best evergreen privet hedge. 12-28 inch 3c, 18-24 inch 4c, 24-30 inch 8c.

LODENSE PRIVET. A fine little border plant where a low hedge is desired. Tiny little green leaves that stay green all winter. 2-year plants 24c.

IRIS

CRIMSON KING. Our start of this variety cost 50c per bulb. It is the most satisfactory of all the Iris. Deep purple with light throat. It is a heavy bloomer over a long period of time. 5 cents each.

BEAUTIFUL DAHLIAS

Mrs. Wolfe raised dahlias that measured 7 inches across this summer. You can do the same. See the picture of them on the next page.

AVALON. Clear yellow.

JANE COWL. Buff with dark center.

JERSEY BEAUTY. Lavender pink that cuts long stems.

KATHLEEN NORRIS. Clear pink and is giant size.

MRS. WARREN. Mauve pink.

JEAN KERR. White snow-ball. It is a continuous bloomer.

Wolfe's Flowering SHRUBS To Glorify the Color Scheme

Permanent Beauty in the most effective sure-to-grow Varieties. Grow yourself a charming and restful Garden of Beauty.

(Prices on page 43)

CRAPE MYRTLES. Best flowering shrub for the southwest. Stands drought. Blooms soft fluffy flowers in dense heads all summer long. RED, PINK, ORCHID

CYDONIA Japonica (flowering quince) Spreading picturesque with single, bright orange-scarlet flowers. Spring flower.

DOGWOOD (red osier) Spreading but erect grower, red branches and white fragrant blossoms. Also have the RED

GOLDEN BELL (Forsythia) Medium growing shrub with showy yellow blossoms, orange center, covers bush in early spring.

HONEYSUCKLE (bush) dark green foliage and coral-carmine and rose-pink blooms. Train as a vine or trim to form a bush or hedge. Perfect for out-door living room.

LATANA (Camera) Hairy, prickly, low-growing perennial-like shrub with aromatic foliage. Bright yellow blooms that change to deep orange.

LILACS White or Purple. The old-fashioned Lilac only a little more streamlined. Fragrance deluxe.

RED-BUD Small tree-like shrub which is covered with rosy-purplish flowers before the leaves put out in the spring. Every Landscape should have one.

RUSSIAN-OLIVE. Small tree with Attractive, silvery-gray foliage. Adds distinction to your color scheme.

Prices on page 43

ALTHEA. Rose of Sharon. Hardy upright growing shrub flowering in both double and single blossoms. white or purple.

ALMOND. Double Pink Flowering. Rather dwarf with double Pink flowers almost covering the limbs in early spring. Also in white. 15c higher than other shrubs.

BARBERRY. Redleaf. Low-growing plant with spreading branches. Bright red in spring and turns to bronze red in fall. Big clusters of scarlet berries in the fall make it beautiful to see.

BRIDAL WREATH. (Spirea V. H.) Graceful, upright grower with deeply cut attractive foliage. The plant is a mass of white blooms in early spring.

BUTTERFLY BUSH. (Buddleia) A new well-shaped bushy shrub, literally covered with cone-shaped clusters of deep rosy-lilac blooms from July until frost. Grows anywhere.

CALLICARPA. (americana) Low growing and blooms profusely. Flowers are lilac colored, followed by violet berries.

CRAB. (Flowering) A small tree with erect branches and a mass of very fragrant pink blossoms in late spring. One inch across and double.

"A House Well Planted Becomes a Home"

COLORFUL BLOSSOMS Throughout the Season

PEACH (Flowering) Tree similar to peach, but more dwarf and has brighter green leaves. It is a mass of big double, rose-like blooms in the spring. Red or white.

PHILADELPHUS (Mock Orange) Upright, free flowering shrub, blooming snow white flowers and suited to all locations.

POMGRANITE. Double red flowering. Medium shrub with glossy green foliage, orange-red flowers and very attractive crimson fruit.

SPIRAEA (Anthony Waterer) Dwarf spreading shrub with corycombs of bright rose flowers in summer.

SPIREA (Billiard) Medium shrub with slender spikes of rose-pink flowers in the summer.

SUMAC (shining) Tree-like shrub with brilliant foliage and scarlet berries in the fall

TAMARIX Tall growing with feathery cedar-like foliage, plumes of pink flowers. Often called salt cedar. Very hardy plant.

WEIGLA (rosea) Upright, medium shrub with trumpet-shaped flowers varying from flesh-pink to rose.

NOTICE!

ALL of Wolfe's Trees and Plants are FRESHLY dug, packed in special wet material and rushed to you in first class condition. Plant them on arrival. If delayed in planting, keep the bundle wet and in a warm place . . . out of the cold.

WISTERIA (Chinese)

The old Wisteria had to be 10 years old to bloom. This new one blooms first year, larger and richer color. Purple flowers throughout the spring, summer and fall. Grows as a bush or vine. Can be used to cover unattractive trees, walls, fences or other unsightly structures. Mrs. Wolfe says, "Chinese Wisteria is my favorite."

WILLOW (Pussy) A tall shrub of compact and graceful growth with large silvery flowers in late winter.

WILLOW (Flowering) A large, shrub-like tree with willowy branches and foliage similar to willow. Bears trumpet-shaped flowers all summer. The flowers are lilac colored with two yellow stripes in the throat. Well adapted to light soils and arid sections.

HOW TO ORDER

USE THE ORDER BLANK Look through the catalog carefully and write out your needs on a piece of scratch paper. Then transfer them in print to the enclosed order blank. Help us prevent mistakes. Each order is carefully filled by our packing department and only select plants are shipped. If an error occurs in your shipment, please notify us within 10 days so we can correct it. Please get your order in early. Print your name and address.

WE PLAY SANTA CLAUS

In appreciation of your order for \$5.00 or more, we send you something free. We try to pick out a tree, vine or shrub that you will like—that is adapted to your locality and send it with your order.

SHIPPING CHARGES

We pay shipping and postal charges on all orders of \$5.00 or more. If your order is less than \$5.00, add 10c to each dollars worth. Example—if your order is \$2.65, add 20c, \$3.85, add 30c.

GUARANTEE

Every tree and plant we sell is absolutely guaranteed to be true to label, and should any error occur, on proper proof, we will replace free of charge, but will not be liable for any greater amount than purchase price. Every tree is triple inspected and packed so they will reach you in first class condition so that with care in planting, all trees should live. Care of your trees saves money for both of us.

Every tree and plant sold by us is guaranteed to live one year. We will replace all that die within one year from planting at one half price if you will pay the transportation charges on the shipment. Requests for replacement of dead trees must be made during the month of September, 1941.

ASPARAGUS (rust proof) Every Home should have this health giving plant in the garden. 12 plants 50c

RHUBARB (Pie plant) Easy to grow and delicious for pies and sauce. 5 plants 55c, 10 plants 95c

WOLFE'S NURSERY guarantees every plant to be true-to-name—to reach you alive and in good condition and live one year. Plants that die the first year will be replaced at half price provided you pay the shipping charge. We are not to be held responsible for any amount greater than the purchase price of any stock. Any plant that should prove untrue to name will be replaced free or the purchase price returned. Any complaint (except true-to-name) must be made within ten days after stock is received. Requests for replacement of stock must be made during the month of September, 1941.

\$25.00 CASH PRIZE

NAME THIS GRAND PEACH AND WIN \$25.00 IN CASH

DESCRIPTION

Each Mail during the Fruit and Nut ripening season brings me new specimens of Varieties that customers and friends consider worthy of propagation. Each year in the thousands of miles I travel to visit successful Orchardists, I have the opportunity to observe the behavior of a large number of varieties. I have thoroughly tested the CREAM of all these selections in my experimental orchard to determine their commercial worth. The most promising of all I have found is this Grand new peach that I am asking you to name.

It is similar to TEXABERTA in size, color, size of seed, flavor and shipping quality. This big yellow free-stone ripens just after Early Wheeler, about June 10th to 15th and seems to be extra Frost-resistant. The big delicious peaches hang on the tree remarkably well after they are ripe.

I want the same friends and customers who have helped in my quest of new and better varieties to suggest a suitable name for this Outstanding Peach. I will pay \$25.00 in cash to any eligible person sending in the winning name. Read the RULES and rush your suggestion into the mail.

I have only a limited number of these trees for distribution and rather not sell any one person more than 100 trees this year. However, if you have a location suitable for display or a demonstration orchard I will let you have more than the stated amount.

RULES

1. Order \$5.00 or more of anything in our catalog and you are eligible to send in one name—\$10.00 or more, three names.
2. In case more than one person sends in the prize winning name, the first of these names to be received in the mails will be selected.
3. All names must be in our office on or before February 28th.
4. The winners' Name will be announced over one of the large Texas Radio stations and a check mailed March 1st.
5. The second best name will receive \$5.00 in Nursery Stock.
